The Jean-Marie Pelt Botanical Garden in Nancy boasts a botanical and horticultural heritage of paramount national importance. Previously mainly dedicated to research, it has embarked on extensive efforts to better integrate itself into the metropolis and the region, through the implementation of numerous actions aimed at making it more visible, attractive, and useful for the entire diversity of the population. This highly inclusive project has significantly altered its image and led to a tripling of its attendance between 2015 and 2022. This intervention aims to present some examples of innovative projects explaining this significant increase in visibility for citizens.
